

AWAAIT completes Phase 1 of the European Commission's H2020-SME Instrument program

The start-up is now working to achieve Phase 2, which would allow to scale up and commercialize its DETECTOR system internationally

Barcelona, August 2015 – AWAAIT, through its R&D business unit HAL, has successfully concluded its H2020-SME Instrument Phase 1 project, TRAINSFARE, aimed to tackle fare evasion in public transport. The European Commission has approved the feasibility study delivered six months after the signature of the grant.

AWAAIT is now working on extending the European Commission's funding by obtaining a Phase 2 grant, valued in between €500k and €2.5M. The goal is to scale up and commercialize DETECTOR, the main technological solution developed under the TRAINSFARE project.
